# Pharmaceutical Antitrust 2021

**Contributing editors**

**Mike Cowie, George G Gordon and Mélanie Thill-Tayara**  
Dechert LLP

---

Lexology Getting The Deal Through is delighted to publish the fourteenth edition of *Pharmaceutical Antitrust*, which is available in print and online at [www.lexology.com/gtdt](http://www.lexology.com/gtdt).

Lexology Getting The Deal Through provides international expert analysis in key areas of law, practice and regulation for corporate counsel, cross-border legal practitioners, and company directors and officers.

Throughout this edition, and following the unique Lexology Getting The Deal Through format, the same key questions are answered by leading practitioners in each of the jurisdictions featured. Our coverage this year includes a new chapter on Mexico.

Lexology Getting The Deal Through titles are published annually in print. Please ensure you are referring to the latest edition or to the online version at [www.lexology.com/gtdt](http://www.lexology.com/gtdt).

Every effort has been made to cover all matters of concern to readers. However, specific legal advice should always be sought from experienced local advisers.

Lexology Getting The Deal Through gratefully acknowledges the efforts of all the contributors to this volume, who were chosen for their recognised expertise. We also extend special thanks to the contributing editors, Mike Cowie, George G Gordon and Mélanie Thill-Tayara of Dechert LLP, for their continued assistance with this volume.

## PHARMACEUTICAL REGULATORY LAW

### Regulatory framework

#### 1 | What is the applicable regulatory framework for the authorisation, pricing and marketing of pharmaceutical products, including generic drugs?

Royal Legislative Decree 1/2015 of 24 July 2015, which approved the consolidated text of the Law on Guarantees and Rational Use of Medicinal Products and Medical Devices (hereafter the Medicines Act), governs the authorisation, pricing and financing, marketing and pharmacovigilance of pharmaceutical products. The procedure of authorisation, registration and dispensation of industrially manufactured medicines for human use is further regulated by Royal Decree 1345/2007.

The Medicines Act regulates price intervention of prescription medicines that are financed by the National Health System (NHS). Although manufacturers are, in principle, free to determine the prices of their products, the prices of prescription medicines that are reimbursed by the NHS and dispensed in Spain are fixed by the government as maximum prices. Pharmacies, wholesalers and pharmaceutical companies are required to provide the necessary information to allow reimbursement by the pharmacies to wholesalers and pharmaceutical companies of the difference between the regulated price and the free price when medicines included in the NHS financing system are dispensed in Spain through a private prescription. Royal Decree 271/1990 further develops the procedure for setting the industrial price of medicines.

Royal Decree 177/2014 regulates the reference price system and homogenous group system. The reference price system is relevant for the financing of medicines, in that it determines the maximum price at which medicines are financed by the NHS. The homogeneous group system is relevant for the dispensation of medicines, in that it determines the price relevant for the application of dispensation and substitution obligations imposed on pharmacists.

Royal Decree 177/2014 also regulates certain information systems in connection with the financing and pricing of medicines and medical devices.

### Regulatory authorities

#### 2 | Which authorities are entrusted with enforcing these rules?

The main regulatory body in charge of enforcing the Medicines Act is the Spanish Agency for Medicines and Sanitary Products (AEMPS). The AEMPS functionally belongs to the Ministry of Health (MoH). It is responsible for ensuring efficacy, safety, quality and accurate information in relation to medicines and medical devices. To that end, the AEMPS carries out a wide range of activities:

- evaluation and authorisation of medicines for human and animal use;

- authorisation of clinical trials;
- quality control and continuous monitoring of medicine safety once medicines are on the market;
- authorisation and inspection of pharmaceutical companies;
- supervision of medicine supply and procurement;
- inspection and control of narcotic drugs and psychotropic substances;
- certification, control and supervision of medical devices;
- combating illegal and counterfeit medicines and medical devices;
- monitoring safety of cosmetics and hygiene products;
- providing all relevant information to the public and healthcare professionals; and
- adopting regulations to facilitate the exercise of its functions.

The Directorate General for the Basic Portfolio of NHS Services and Pharmacy of the MoH decides on the inclusion of a medicine in the NHS and manages the reference price system.

The Interministerial Price Commission for Medicines of the MoH is responsible for fixing the prices of medicines.

The 17 Spanish regions have competencies in the healthcare sector and are responsible for the provision of public healthcare services and the enforcement of the regulation governing wholesale and supply, advertising and promotion, etc.

### Pricing

#### 3 | Are drug prices subject to regulatory control?

Although manufacturers are, in principle, free to determine the prices of their products, the prices of prescription medicines that are reimbursed by the NHS and dispensed in Spain are fixed by the government as maximum prices. In particular, the government fixes the maximum price of prescription medicines included in the NHS financing system. This regulated price applies when the medicine is dispensed in Spain through a prescription of the NHS and thus reimbursed by the NHS. The price of medicines not included in the NHS financing system, as well as the price of medicines included in the NHS financing system that are dispensed through private prescription and thus not reimbursed by the NHS, is freely determined by the pharmaceutical company. This price must, however, be notified to the MoH, which may object to it on grounds of public interest.

Medicines for which a generic exists, or that have been on the market for more than 10 years in the EU, are subject to the reference price system.

## Distribution

### 4 | Is the distribution of pharmaceutical products subject to a specific framework or legislation? Do the rules differ depending on the distribution channel?

Royal Decree 823/2008 sets the margins of wholesalers and pharmacies, as well as certain deductions and discounts applicable to the dispensation of medicines. Royal Decree 782/2013 regulates the activities of distribution and brokering of medicinal products.

Royal Decree 1416/1994 establishes the main rules concerning the advertising of medicines for human use.

Royal Decree 870/2013 regulates the distance sales, through websites, of non-prescription medicines for human use.

## Intersection with competition law

### 5 | Which aspects of the regulatory framework are most directly relevant to the application of competition law to the pharmaceutical sector?

Article 94 et seq of the Medicines Act, which govern the intervention of pharmaceutical prices by the government, are the most relevant provisions for the application of competition law in the pharmaceutical sector, since they are the origin of the parallel trade phenomenon that has given rise to a proliferation of cases before the European Commission and the EU courts (*GSK Spain* case), the national competition authority and the Spanish courts. Prices fixed at an artificially low level provide a strong incentive to wholesalers (and even pharmacies) to export medicines into higher-price countries, such as Germany, the Netherlands and the United Kingdom.

Article 67 et seq of the Medicines Act, concerning wholesale distribution, are also relevant, in particular since wholesalers have relied on them to claim a right to be supplied by pharmaceutical companies.

The provisions of the Act regulating marketing authorisations, the limits to their withdrawal, or the obligation to keep the market supplied could also become relevant following the EU's precedent set in the *AstraZeneca* case. In general, the high level of regulation is relevant to the application of the competition rules, since, together with the NHS's purchasing power, it led the Spanish Commission for Markets and Competition (CNMC) for many years to conclude that pharmaceutical companies are not necessarily dominant, even where their market shares in a given product are high. Although in more recent decisions the authority found that regulation does not necessarily exclude dominance, it nevertheless took this circumstance into account in assessing the existence of an objective justification to allegedly abusive conduct.

Legal limitations on advertising and promotion of medicinal products are also relevant to the application of the competition rules and set the framework for voluntary codes of conduct in the industry.

## COMPETITION LEGISLATION AND REGULATION

### Legislation and enforcement authorities

#### 6 | What are the main competition law provisions and which authorities are responsible for enforcing them?

The Spanish Competition Act 15/2007 (SCA) and its implementing Regulation 261/2008 establish the essential provisions of national competition law. EU competition rules, in particular articles 101 and 102 of the Treaty on the Functioning of the European Union (TFEU), are cumulatively applicable to any case that is liable to affect trade between member states of the EU.

The prohibition of anticompetitive agreements and abuse of dominant position are enshrined in articles 1 and 2 of the SCA, which mirror articles 101 and 102 of the TFEU. A peculiarity of Spanish law is the

possibility of considering acts of unfair competition that distort the conditions of competition in the market as a separate infringement of the SCA, apart from the possibility of pursuing such infringements before the commercial courts under the Unfair Competition Act. Thus, article 3 of the SCA prohibits acts of unfair competition that affect the public interest by distorting free competition. In a decision of 23 January 2014, the Spanish Commission for Markets and Competition (CNMC) found that the offer by generic producers of discounts to pharmacists above the maximum level permitted by law could infringe article 3 of the SCA, although it dismissed the case on the facts, since no such discounts had actually been offered.

The Spanish merger control regime applies to any concentration in which at least one of the two following circumstances is met:

- a market share of at least 30 per cent is reached or exceeded as a consequence of the concentration in the relevant national product or services market or in a geographical market defined therein. However, even if this threshold is met, the transaction is exempted from the merger control regime when the total turnover of the target, in Spain, does not exceed €10 million in the last financial year, provided that the individual or combined market share of the parties is below 50 per cent in any of the affected markets in Spain; or
- the aggregated turnover, in Spain, of all the companies involved in the transaction exceeds €240 million, provided that at least two of the companies involved had an individual turnover, in Spain, of at least €60 million, in the last financial year.

These thresholds are only triggered if the transaction does not have a 'Community dimension' pursuant to the EU Merger Regulation. When the relevant thresholds are met, a filing to the CNMC is mandatory before the transaction is closed (a notification can be made from the moment there is a concentration project or agreement).

Spanish law provides for criminal sanctions for antitrust infringements as regards bid rigging in public tenders, which could become relevant in hospital and other public tenders in the pharmaceutical sector. The corresponding provision of the Criminal Code has, however, not yet been enforced in practice. In March 2017, the Central Court of Preliminary Investigation closed criminal proceedings for price manipulation against several petrol companies that had already been sanctioned by the CNMC.

Since October 2015, companies that have participated in bid-rigging cartels in public tenders may be excluded from future tenders under the public procurement rules. In a decision of March 2019, the CNMC indicated that the prohibition to enter into contracts with the public administration operates automatically when a serious infringement of the competition rules has been established, but did not set the duration and scope of the prohibition, which will be decided in a subsequent administrative procedure by the Ministry of Finance. However, the prohibition was suspended by the National Court.

In Spain, the central competition authority is the CNMC, which was created by Act 3/2013. The CNMC is the result of a merger, as of 7 October 2013, of the former competition authority (the National Competition Commission (CNC)) with the regulatory agencies of the network industries (telecommunications, energy, postal services, broadcasting, rail and air transport). The CNMC has two separate decision-making chambers that are in charge of antitrust and regulatory issues, although cases that are relevant to both sections are heard by the Plenary Chamber. Investigations in the area of antitrust are carried out by the Competition Directorate, which concludes its investigations with a proposal to the Council. The Competition Chamber of the Council then takes a final decision on the case. Regional competition authorities are also competent to investigate and decide on anticompetitive practices (when their scope and effects are limited to the territory

of the respective region), although their practical relevance is more limited. Spanish commercial courts are also empowered to apply EU and national competition law regarding anticompetitive practices and abuses of a dominant position.

The CNMC is the only competent body to investigate and clear mergers in the pharmaceutical industry. It has the power to adopt final decisions in merger proceedings, either prohibiting or authorising proposed transactions (with or without conditions). The government may only intervene exceptionally against a decision prohibiting a merger or making its clearance subject to conditions, provided the Minister of Economy decides to refer such cases to the Council of Ministers. In such cases, the Council of Ministers has the power to amend the CNMC's decision on relatively broad grounds of public interest, such as national security, public health or the environment. Since the current SCA entered into force in 2007, the government has only used its powers on one occasion (*Antena 3/La Sexta* case). The CNMC analyses whether the proposed transaction may hinder the maintenance of effective competition in the market. The substantive test under the Spanish merger control regime is therefore similar to the 'significant impediment of effective competition' test under the EU Merger Regulation. Judicial appeals against resolutions of the Council of the CNMC may be lodged before the Spanish National Court.

### Public enforcement and remedies

7 | What actions can competition authorities take to tackle anticompetitive conduct or agreements in the pharmaceutical sector and what remedies can they impose?

The decisions of the CNMC may order:

- the cessation of the prohibited conduct;
- the imposition of specific conditions or obligations, be they structural or behavioural;
- the removal of the effects of the prohibited practices contrary to the public interest; and
- the imposition of fines.

By way of example, in a 1998 decision, the Spanish competition authority imposed fines on various pharmaceutical companies for rigging public vaccine tenders and ordered the companies concerned to cease their collusive practices. In a 2004 decision, it held that the recommendation of the association of pharmaceutical wholesalers (Fedifar) to their members to uniformly react to the introduction of a new pricing scheme by Pfizer amounted to a collective recommendation prohibited by article 1 of the SCA and ordered them to cease that practice, although no fines were imposed.

Infringements of the SCA are classified as:

- minor (including failure to notify a concentration when requested by the CNMC and failure to notify a concentration within the deadline established in case of takeover bids or if notification is requested by the CNMC), with a fine of up to 1 per cent of the undertaking's total worldwide turnover;
- serious (including submission of incomplete, incorrect, misleading or false information and infringement of article 3 of the SCA), with a fine of up to 5 per cent of the total worldwide turnover; and
- very serious (including infringements of articles 1 and 2 of the SCA), with a fine of up to 10 per cent of the total worldwide turnover.

In addition to these sanctions, a fine of up to €60,000 may be imposed on the legal representatives of the company or on the persons that comprise the management bodies that have participated in the agreement or decision. In a decision of May 2016, the CNMC imposed, for the first time, fines on four executives of adult-diaper manufacturers and their association for participating in a cartel to fix the prices of

adult-diapers financed by the National Health System (NHS) and sold through the pharmacy channel (some of these fines have been quashed on appeal). Since then, the CNMC has imposed these sanctions in several instances.

The CNMC may also impose periodic penalty payments of up to 5 per cent of the average daily total worldwide turnover during the previous financial year for each day of delay to oblige undertakings to comply with a decision.

A leniency regime was, for the first time, included in the SCA of 2007 and entered into force in February 2008. This leniency regime offers both total immunity and a reduction of fines in cartel cases, and regulates the procedures for exemptions and reductions of the amount of fines. The beneficiary of total immunity is also exempt from the prohibition to contract with the public administration provided in article 71 of Act 9/2017. The beneficiary of the reduction of the fine may also benefit from this exemption.

In June 2013, the CNC published guidelines on its leniency programme.

### Private enforcement and remedies

8 | Can remedies be sought through private enforcement by a party that claims to have suffered harm from anticompetitive conduct or agreements implemented by pharmaceutical companies? What form would such remedies typically take and how can they be obtained?

Any victim of an anticompetitive agreement or conduct by a pharmaceutical company is entitled to claim damages before the commercial or civil courts, both in follow-on or stand-alone damages actions based on the general provisions of the Spanish Civil Code and legislation implementing the EU Damages Directive 2014/104/EU, which was adopted in May 2017 by means of Royal Decree Law 9/2017. In the case of horizontal agreements, typically cartels, both direct and indirect purchasers have standing to claim damages. In a judgment of 7 November 2013 in the *Sugar* cartel case, the Supreme Court recognised that the infringing parties may invoke the passing-on defence against any such claims by direct purchasers. Nonetheless, the burden of proof in that respect is on the infringing party, which will have to prove that not only the excessive price, but the entire damage (ie, including possible lost profit owing to a loss of market share, etc) has been passed on to the next level.

### Sector inquiries

9 | Can the antitrust authority conduct sector-wide inquiries? If so, have such inquiries ever been conducted into the pharmaceutical sector and, if so, what was the main outcome?

The CNMC is competent to launch sector-wide inquiries. To date, no sector-wide inquiries have been conducted into the pharmaceutical sector. However, in October 2015, the CNMC published a study on the retail distribution of pharmaceutical products, which analysed the restrictions of competition stemming from the current regulatory framework (eg, restrictions concerning the number of pharmacies and the distance between them) and proposed several measures to increase competition. The CNMC also published a report on the Draft Royal Legislative Decree that approves the consolidated text of the Law on Guarantees and Rational Use of Medicinal Products and Medical Devices (the future Royal Legislative Decree 1/2015), and a report on the Draft Royal Decree on financing and pricing of pharmaceutical and healthcare products. In November 2016, the CNMC published a report on the Draft Royal Decree implementing the new Patent Act. The Report analyses possible anticompetitive use of patents, particularly in the pharmaceutical sector, through collusive practices (patent settlements) or

unilateral conduct (patent thickets, product hopping, abuse of litigation, abuse of regulatory proceedings, etc) and invited the legislator to take these practices into account in designing a patent system that reconciles promotion of innovation and defence of competition. In March 2017, the CNMC launched a study on wholesale distribution and marketing of pharmaceutical products to analyse potential restrictions of competition (including strategic behaviour aimed at delaying generic entry), a possible review of price regimes, the adoption of centralised purchasing schemes and tenders as mechanisms to increase competition, as well as regulatory restrictions on access to the market and exercise of the wholesale distribution activity. In October 2018, the CNMC adopted a report on the Draft Royal Decree regulating the financing of sanitary products by the NHS for outpatients and the margins applicable to their distribution and dispensation. In June 2019, the CNMC published a report on the Action Plan of the Ministry of Health on the promotion of the use of biosimilar and generic medicines, where it proposes, inter alia, to modify the reference price system to allow larger price reductions, give preference to generics in dispensation and foster joint buying by the public sector.

In January 2021, the CNMC launched a public consultation in relation to the study on wholesale distribution and marketing of pharmaceutical products started in 2017. In its Action Plan 2021–2022, the CNMC indicated that it will finalise this study in 2021. The same plan mentions separately the preparation of a study on pharmaceutical distribution in 2021–2022.

### Health authority involvement

**10** | To what extent do health authorities or regulatory bodies play a role in the application of competition law to the pharmaceutical sector? How do these authorities interact with the relevant competition authority?

The CNMC can issue reports on draft legislation following a request of the health authorities. For instance, the 2018 report on the financing of sanitary products was issued at the request of the Ministry of Health (MoH). Health authorities have also lodged complaints before the CNMC, such as the complaint filed by a regional health authority against the MoH, the Spanish Association for the Pharmaceutical Industry (Farmaindustria) and several pharmaceutical companies, in relation to an alleged concerted practice not to participate in a tender organised by the regional authority. In the *Cofares/Cofarta* merger, the CNMC consulted the MoH and certain regional health authorities as part of the market test on the commitments offered by Cofares.

The regulatory authority, the Spanish Agency for Medicines and Sanitary Products (AEMPS), has been consulted on several occasions by the CNMC on different aspects of the pharmaceutical sector. For instance, in the context of the investigation carried out in the *EAEPIC/Laboratorios Farmacéuticos* case, the CNMC requested information from the AEMPS about possible disruptions in the supply of medicines. In the *Citicolina* case, the AEMPS provided, at the request of the CNMC, information about pharmaceutical companies authorised to market the active substance at issue.

### NGO involvement

**11** | To what extent do non-government groups play a role in the application of competition law to the pharmaceutical sector?

Under the Spanish Civil Procedure Act, legally constituted consumer and user associations have standing to defend the rights and interests of their members and of the association in court, as well as the general interests of consumers and users. Trade associations and consumer groups also have standing to file complaints before the CNMC and have the right to be consulted on the approval of any new regulation.

Farmaindustria, Fedifar and the Spanish Federation of Pharmacists have in the past filed complaints before the Spanish competition authority against alleged anticompetitive practices or abuses of a dominant position. The European Association of Euro-Pharmaceutical Companies has also brought complaints against pharmaceutical companies related to parallel trade issues.

## REVIEW OF MERGERS

### Thresholds and triggers

**12** | What are the relevant thresholds for the review of mergers in the pharmaceutical sector?

The Spanish merger control regime applies to any concentration in which at least one of the two following circumstances is met:

- a market share of at least 30 per cent is reached or exceeded as a consequence of the concentration in the relevant national product or services market or in a geographical market defined therein. However, even if this threshold is met, the transaction is exempted from the merger control regime when the total turnover of the target, in Spain, does not exceed €10 million in the last financial year, provided that the individual or combined market share of the parties is below 50 per cent in any of the affected markets in Spain; or
- the aggregated turnover, in Spain, of all the companies involved in the transaction exceeds €240 million, provided that at least two of the companies involved had an individual turnover, in Spain, of at least €60 million, in the last financial year.

**13** | Is the acquisition of one or more patents or licences subject to merger notification? If so, when would that be the case?

The acquisition of one or more patents or licences would be considered as a concentration for merger control purposes, provided that a turnover can be attributed to the asset in question.

### Market definition

**14** | How are the product and geographic markets typically defined in the pharmaceutical sector?

The Spanish Commission for Markets and Competition (CNMC) has adopted the same approach as the European Commission (EC) when assessing the market definition in the pharmaceutical sector. Regarding product market definition, the CNMC has in general relied on the third level of the anatomical therapeutic chemical (ATC) classification (which allows for a regrouping of pharmaceuticals based on their therapeutic indication) as the starting point for market definition, although on occasions it has relied on other ATC levels. For instance, in a decision of March 2018, the CNMC defined the relevant market of an orphan medicine based on the ATC5 level, taking into account the specific characteristics of orphan medicines (which are developed to treat diseases for which there is no other medicine, or no other medicine is effective).

In accordance with the EC's practice, the geographic market is usually defined as national because of its regulation.

### Sector-specific considerations

**15** | Are the sector-specific features of the pharmaceutical industry taken into account when mergers between two pharmaceutical companies are being reviewed?

Mergers between pharmaceutical companies are analysed on a case-by-case basis. If the specific features are relevant for the competition analysis, they will be taken into account. Certain aspects have been

referred to widely: with respect to entry barriers, the most important for the manufacturing and marketing of medicines is pharmaceutical regulation, as well as patents and the procurement of raw materials, among others. In addition, the strong countervailing buyer power is also relevant since the Spanish public authorities, in particular the National Health System, are the main customers of pharmaceutical companies.

### Addressing competition concerns

16 | Can merging parties put forward arguments based on the strengthening of the local or regional research and development activities or efficiency-based arguments to address antitrust concerns?

The criteria to be taken into account in merger reviews under the Spanish Competition Act 15/2007 include the economic efficiencies derived from the concentration and, in particular, the contribution that the concentration may make to improving the production or marketing systems and to business competitiveness, and the extent to which these efficiencies are transferred to the intermediate and ultimate consumers, specifically in the form of a wider or better supply and of lower prices.

### Horizontal mergers

17 | Under which circumstances will a horizontal merger of companies currently active in the same product and geographical markets be considered problematic?

When assessing mergers, the Spanish competition authority analyses whether a product and geographical overlap may hinder the maintenance of effective competition in the market. The first elements taken into account when analysing a merger are the structure of the relevant markets and the position of the parties therein. However, under certain circumstances, high market shares are not necessarily equivalent to a hindrance of effective competition in the market and concentrations resulting in high market shares have been authorised in a number of cases (for instance, in a decision of July 2016, the CNMC authorised a concentration between two manufacturers of radiopharmaceuticals, giving rise to market shares of 70 to 80 per cent, and in a decision of November 2016, the CNMC authorised a concentration in the same sector giving rise to shares of 80 to 90 per cent in a narrowly defined market). Other elements taken into account when analysing a merger are:

- the existence of actual or potential competitors inside or outside the national market;
- the possible alternatives for suppliers and consumers and their access to supply sources;
- the existence of barriers to entry into the market;
- the evolution of supply and demand;
- the negotiating power of supply and demand and their capacity to compensate the position of the parties to the transaction in the market; and
- the economic efficiencies derived from the transaction; in particular, the contribution of the merger to the development of production or marketing systems, the competitiveness of the industry and the proportion in which those efficiencies are transferred to consumers through a better or wider supply and lower prices.

### Product overlap

18 | When is an overlap with respect to products that are being developed likely to be problematic? How is potential competition assessed?

The CNMC has usually focused on existing product overlaps. However, in a decision of September 2018, the CNMC analysed potential overlaps between two vaccines being developed by the merging pharmaceutical

companies and came to the conclusion that they raised no competition concerns since the investigation by both parties was at a very early stage (and there was therefore uncertainty as to the possible clinical use and marketing of the vaccines at issue) and potential competition was high, with 45 candidate vaccines in the development or clinical trial phase.

### Remedies

19 | Which remedies will typically be required to resolve any issues that have been identified?

Remedies may be either structural or behavioural, although, as in the EU, the CNMC has a certain preference for structural remedies. The CNMC closely monitors the compliance by the parties with any remedies that have been made binding on them. The remedies usually include reporting obligations to the CNMC on the compliance with the conditions imposed.

A (rare) example of a concentration in the pharmaceutical sector authorised subject to conditions is the *Cofares/Hefame* case, a concentration of two wholesalers active in the distribution of pharmaceutical and para-pharmaceutical products in Spain and controlled by cooperatives of pharmacies. The Spanish competition authority held that minimum purchase obligations of the members of the two pharmacy cooperatives and minimum membership terms amounted to a barrier to entry for new wholesalers. The potential threat to competition was high, given the large market share that the merged entity would have. Thus, the merger was approved under the conditions that the minimum purchase requirement was lowered from 30 to 25 per cent, and the minimum term of membership was reduced from five years to one year. Similar commitments (lowering the minimum purchase requirements to 25 per cent and eliminating the minimum term of membership) were accepted by the CNMC in the 2019 *Cofares/Cofarta* case. In July 2019, the CNMC authorised the *BSC/BTG* merger, subject to the implementation of the divestment commitments undertaken by BSC before the US Federal Trade Commission.

## ANTICOMPETITIVE AGREEMENTS

### Assessment framework

20 | What is the general framework for assessing whether an agreement or concerted practice can be considered anticompetitive?

Article 1(1) of the Spanish Competition Act 15/2007 (SCA) prohibits all agreements, collective decisions or recommendations, or concerted or consciously parallel practices, that have as their object, have, or potentially have the effect of preventing, restricting or distorting competition in all or part of the Spanish market. Agreements that would otherwise be caught by article 1(1) of the SCA may be exempted if they generate efficiencies that benefit consumers, do not impose restrictions that are not indispensable for the attainment of these efficiencies and do not eliminate competition on the relevant market.

Pursuant to the SCA, EU block exemption regulations also apply in the national context (ie, to agreements that do not affect trade between member states). Although article 1 of the SCA closely mirrors article 101 of the Treaty on the Functioning of the European Union (TFEU), it differs from the latter in that it explicitly prohibits 'conscious parallel practices', a form of concerted practice that has also been developed in the case law of the Court of Justice of the European Union (CJEU). The Spanish competition authority defined this practice in its 2001 decision in *Laboratorios Farmacéuticos* as 'a harmonised behaviour by various market participants that is not the result of an express or tacit agreement, but the result of carrying out their respective actions with the purpose of avoiding disharmony'. In the *Vaccines* case of

1998, the Spanish Commission for Markets and Competition (CNMC) relied on mere incidental evidence for its finding of a concerted bid-rigging practice.

In a decision of October 2015, the CNMC closed proceedings against several pharmaceutical companies and the Spanish Federation of Health Technology Companies for alleged information exchanges and price-fixing agreements, without deciding on the substance, since the alleged infringements were time barred. In a decision of 12 January 2016, the CNMC dismissed a complaint by a regional health authority against the Ministry of Health (MoH), the Spanish Association for the Pharmaceutical Industry (Farmaindustria) and several pharmaceutical companies, in relation to an alleged concerted practice not to participate in a tender organised by the regional authority to select pharmaceutical products to be dispensed in pharmacies in the case of prescription by active substance and certain measures taken by the MoH against the initiative of that authority. According to the CNMC, the conduct of the MoH fell outside the scope of competition law since the MoH acted as a public authority and the conduct of the pharmaceutical companies could be explained by the legal uncertainty concerning the legality of the tender organised by the regional health authority, the competence of which to organise such a tender had been challenged by the Spanish government before the Constitutional Court. Further to an investigation into alleged market sharing and bid rigging in the supply of medical gases to hospitals, the CNMC concluded in a decision of July 2017 that the alleged infringement of article 1 of the SCA had not been established and closed the case.

With regard to collective recommendations, in its 2009 decision *Productos Farmacéuticos Genéricos*, the CNMC fined four pharmaceutical associations for making collective recommendations in an attempt to harmonise the economic behaviour of pharmacists against Laboratories Davur. However, in a judgment of 24 October 2014, the Supreme Court quashed this decision with regard to one of the associations (it did not grant leave to appeal to the other three associations), holding that the communications sent by the association to pharmacists were not aimed at harmonising their behaviour in relation to certain price cuts announced by Davur, but essentially provided information on the legislation in force and an interpretation of the legal criteria to determine which product pharmacists are required to dispense (not the cheapest product but the one with the lowest price included in Annex 5 to Order 3997/2006).

In a 2009 decision confirmed by a judgment of the Supreme Court of March 2015, the former competition authority (the National Competition Commission) found that a regional health authority and the Council of Official Associations of Pharmacists had infringed article 1 of the SCA by agreeing that the Official Associations of Pharmacists would establish which pharmacies would supply, in rotation, public and private medico-social centres, which amounted to market sharing. In monitoring the compliance with the 2009 decision, the CNMC found, in a decision of September 2014, that certain medico-social centres were implementing a system of rotating shifts between the pharmacies supplying them, but held that the implementation of this system was the result of a unilateral decision of the centres, and was therefore outside the scope of article 1 of the SCA. In a decision of November 2016, the CNMC found that there was no evidence of a concerted practice between pharmacies of the Murcia region, through the Official Association of Pharmacists of that region, to establish a similar system of rotating shifts, but also ordered the investigatory body to continue monitoring since other possible forms of coordination between pharmacies had not been analysed during the investigation and the regional legislation in force promoted the adoption of agreements between pharmacies.

In a decision of February 2021, the CNMC fined two suppliers of radiopharmaceuticals for market sharing by means of a subcontracting agreement and customer allocation.

## Technology licensing agreements

### 21 To what extent are technology licensing agreements considered anticompetitive?

Technology licensing agreements are assessed under Commission Regulation (EU) No. 316/2014 of 21 March 2014 on the application of article 101(3) of the TFEU to categories of technology transfer agreements (TTBER), which is applicable *mutatis mutandis* to article 1 of the SCA. The TTBER provides a general exemption for two-party technology transfer agreements involving patents, know-how or software copyrights if the parties' market share in any relevant product market or technology market does not exceed 20 per cent (combined, for competitors) or 30 per cent (each, for non-competitors). However, the TTBER exemption generally does not apply to agreements that include restrictions on price, limits on output, market-allocation provisions, or restrictions on the licensee's ability to conduct research or exploit its own technology.

## Co-promotion and co-marketing agreements

### 22 To what extent are co-promotion and co-marketing agreements considered anticompetitive?

There are no precedents of co-promotion and co-marketing agreements being analysed by the CNMC. While co-promotion agreements are less problematic from an antitrust perspective because the parties are usually not competitors in the manufacturing of the product in question, co-marketing agreements may give rise to horizontal price fixing or market sharing and should, therefore, be carefully assessed. Nevertheless, following the *Johnson & Johnson/Novartis* decision of the European Commission (EC), co-promotion agreements might be found to infringe article 1 of the SCA or article 101 of the TFEU if they are entered into by an originator and a generic producer to delay generic entry.

## Other agreements

### 23 What other forms of agreement with a competitor are likely to be an issue? How can these issues be resolved?

Of particular concern to the CNMC since the entry into force of a new Competition Act in 2007 have been the activities of industry associations, and many decisions imposing fines have been adopted. They relate to: information exchange schemes, which must not lead to an exchange of individual, non-historic data, but rather limit themselves to the exchange of aggregated historical data; collective recommendations, such as those condemned in the *Fedifar* and *Davur* decisions (the latter was quashed with regard to one of the associations by the Supreme Court); and codes of conduct, which must not limit competitive behaviour, such as advertising, beyond what is indispensable to achieve legitimate deontological objectives. In a decision of 23 January 2014, the CNMC found that the declarations made by the president of a generic manufacturer association from his personal Twitter account, concerning generic producers who offered aggressive price reductions to the National Health System (NHS), were not capable of significantly affecting competition, given their limited reach and short duration. The judgment of the Supreme Court in the *Davur* case, as well as other judgments that annulled decisions of the competition authority on collective recommendations in other sectors, might lead the authority to raise the standard for a finding of an illegal collective recommendation.

## Issues with vertical agreements

### 24 | Which aspects of vertical agreements are most likely to raise antitrust concerns?

Any limitation of parallel trade in vertical agreements is likely to raise competition concerns. After GSK notified a dual-pricing scheme to the EC in 1998, the CJEU held on appeal, on the one hand, that any limitations of parallel trade, also in the pharmaceutical industry, were restrictions of competition by object, and, on the other, that the Commission had been wrong to reject the exemption sought by GSK for that restriction under article 101(3) of the TFEU. The litigation at EU level was accompanied by a number of cases before the Spanish competition authority and the administrative courts, which were eventually all decided in favour of GSK.

Following these precedents, pharmaceutical companies started adopting free-pricing systems instead of the usual supply quota systems operated under the *Bayer-Adalat* case law of the European courts. Under these schemes, the manufacturers only set one free price, which applies to any situation not leading to a reimbursement under the public price intervention scheme. Thus, if a medicine is financed by the NHS and dispensed in Spain, the regulated price set by the state will apply, while medicine exports are subject to the (higher) free price set by the manufacturer.

The European Association of Euro-Pharmaceutical Companies and a Spanish wholesaler complained against this new pricing scheme to the Spanish competition authority, which dismissed these complaints in two decisions of May 2009 and September 2009, holding that there was no dual pricing and therefore no restriction of competition. On appeal, the Spanish National Court quashed these decisions in two judgments of 2011 and 2012, holding that the scheme limited parallel trade and therefore had to be assessed pursuant to the *GSK Spain* case law of the CJEU, which qualifies agreements restricting parallel trade as restrictions of competition by object. It also held, however, that under the same case law, the agreements might qualify for exemption under article 101(3) of the TFEU, but that the CNMC had to pronounce itself in this respect. The 2011 and 2012 judgments of the Spanish National Court were confirmed by the Supreme Court in two judgments of 3 December 2014 and 4 March 2016. In particular, in the judgment of 3 December 2014, the Supreme Court rejected that there had not been an agreement for the purposes of article 101 of the TFEU between Pfizer and its wholesalers, since Pfizer had concluded supply contracts with each wholesaler, which included the free pricing provisions. According to the Court, these clauses have as their main object to impede or restrict parallel exports of pharmaceuticals into other member states of the EU. The ruling recalls that the judgment of the Spanish National Court rests on the CJEU's ruling in *GSK Spain*, where the Court held that the application of different prices to financed medicines dispensed in Spain and higher prices to exported medicines amounted to a restriction of competition contrary to article 101(1) of the TFEU.

Further to the Supreme Court's judgments of 3 December 2014 and 4 March 2016, in March 2015, the CNMC started infringement proceedings against Pfizer in relation to a possible restrictive practice consisting of establishing supply contracts liable to impair parallel trade, and in March 2017, it started infringement proceedings against several pharmaceutical companies in relation to the possible establishment of distribution systems involving dual pricing and a possible collusive agreement to establish these systems.

In its decision of 19 January 2017 in the first proceedings, confirmed by a judgment of 22 April 2021, the CNMC held that the pricing system established by Pfizer did not infringe article 1 of the SCA. First, the CNMC found that Pfizer did not establish a dual pricing system with the object of restricting parallel trade, but only set a free price, which was then replaced by the regulated price when the requirements for

the application of the latter were fulfilled. According to the CNMC, Pfizer's behaviour was not an autonomous behaviour, owing to state intervention, and could not therefore be deemed to infringe competition law. Second, the CNMC found that the *GSK Spain* case law could not be applied by analogy to Pfizer's case, since the applicable legal framework was different. According to the CNMC, the establishment of a dual pricing system by GSK was the result of a voluntary decision by GSK, who made an extensive interpretation of the legislation then in force that required the application of the regulated price to all financed medicines sold in Spain (independently of where they were dispensed). In the new legal framework that entered into force in January 2000 – in which the regulated price no longer applies to all sales of financed medicines in Spain, but only to sales of financed medicines actually dispensed to patients in Spain – the establishment by Pfizer of different prices for the same medicine merely complied with the applicable legislation, which implicitly introduced the existence of two different prices for the same product.

In its decision of 30 August 2018 in the second proceedings, the CNMC reached the same conclusion regarding the legality of the pricing mechanisms implemented by the pharmaceutical companies being investigated and also found that the companies at issue did not collude to establish these mechanisms.

Similarly, in a judgment of 7 December 2015, the Provincial Court of Madrid held that the *GSK Spain* case law was not applicable to the free-pricing system of a pharmaceutical company, essentially arguing that the legal framework of the Medicines Act had changed since the *GSK Spain* case and that the scheme did not amount to dual pricing, but rather was the result of a unilateral decision of the pharmaceutical company. In the same judgment, the Provincial Court held that the restructuring of the distribution system of that pharmaceutical company, which resulted in a reduction in the number of wholesalers, was objectively justified since it pursued the objective of increasing efficiency and therefore could not be held abusive, even assuming that the company were dominant. In its order of April 2018, the Supreme Court denied leave to appeal against the judgment of the Provincial Court of Madrid, which has thus become final.

In a decision of October 2018, the CNMC decided not to open infringement proceedings against 20 producers of veterinary medicines for alleged resale price maintenance, territorial restrictions and information exchanges with their distributors. In particular, the CNMC found that the information exchanges at issue did not raise competition concerns since they were carried out in the context of a vertical relation and were necessary for pharmaceutical companies to define their competitive strategies in relation to their competitors.

## Patent dispute settlements

### 25 | To what extent can the settlement of a patent dispute expose the parties concerned to liability for an antitrust violation?

The CNMC is likely to follow EU precedents, including, in particular, the judgments of the CJEU and the General Court in the *Generics*, *Lundbeck* and *Servier* cases to determine whether an agreement whereby an originator company makes payments or gives other benefits to generic companies for delaying the launch of a generic challenging the originator's patent (reverse payment patent settlement) may be deemed to infringe article 1 of the SCA or article 101 of the TFEU.

In a decision of 18 June 2014 (*Citicolina*), the CNMC dismissed for lack of evidence an anonymous complaint against a pharmaceutical company for delaying and impairing generic entry by means of, inter alia, payments made to potential competitors in exchange for not entering the market. In the same decision, the CNMC ordered the Competition Directorate to monitor future developments in the market and, in particular, the granting of marketing authorisation of the active substance at issue and the actual marketing of the authorised products.

## Joint communications and lobbying

26 | To what extent can joint communications or lobbying actions be anticompetitive?

Joint communications in the context of trade associations can be found anticompetitive if they have the object or effect of harmonising the competitive behaviour of their members. In 2009, the CNMC fined four pharmaceutical associations for making collective recommendations (by means of communications sent to their members and published in the press) in an attempt to harmonise the economic behaviour of pharmacists against Laboratories Davur. This decision was quashed by the Supreme Court in relation to one of the associations on the grounds that the communications sent by the association to pharmacists were not aimed at harmonising their behaviour in relation to certain price cuts announced by Davur, but essentially provided information on the legislation in force and an interpretation of the legal criteria to determine which product pharmacists are required to dispense.

As to lobbying actions, the Spanish competition authority found in a 2011 decision that the mere agreement within a trade association to submit legislative proposals containing restrictive elements to the administration is not, in itself, capable of restricting competition, while at the same time, it recalled that the activity of trade associations is subject to the SCA and conduct aimed at harmonising the competitive behaviour of members may infringe article 1 of the SCA.

## Public communications

27 | To what extent may public communications constitute an infringement?

The Spanish competition authority has held that public communications by trade associations or their directors, including press statements, may infringe article 1 of the SCA if they are capable of harmonising the behaviour of the members of the association or of third parties. For instance, in a 2012 decision, the CNMC fined the President of the Tourism Council of the Spanish Confederation of Trade Organisations for public statements made at the International Tourism Fair and to the press, encouraging hotels to increase prices, which were deemed by the CNMC to be a collective recommendation in breach of article 1 of the SCA. However, in October 2013, this decision was quashed by the Spanish National Court judgment that held that the statements at issue were made within the scope of freedom of speech and did not amount to a collective recommendation.

In the pharmaceutical sector, the CNMC found, in a 2014 decision, that the declarations made by the president of a generic manufacturer association from his personal Twitter account, concerning generic producers who offered aggressive price reductions to the NHS, were not capable of significantly affecting competition by harmonising the behaviour of pharmacists, given their limited reach and short duration.

## Exchange of information

28 | Are anticompetitive exchanges of information more likely to occur in the pharmaceutical sector given the increased transparency imposed by measures such as disclosure of relationships with HCPs, clinical trials, etc?

Taking into account, in particular, the type of data to be published, the level of aggregation and the frequency of publication, transparency obligations undertaken by pharmaceutical companies should not raise competition concerns.

## ANTICOMPETITIVE UNILATERAL CONDUCT

### Abuse of dominance

29 | In what circumstances is conduct considered to be anticompetitive if carried out by a firm with monopoly or market power?

Under article 2 of the Spanish Competition Act 15/2007 (SCA), any abuse by one or more undertakings of their dominant position in all or part of the national market is prohibited. Dominance is not in itself prohibited, but if an undertaking holds a dominant position, it has a special responsibility to ensure that its conduct does not distort competition. Abusive behaviour consists mainly of exclusionary conduct (predatory pricing, exclusive dealing, refusal to supply or tying) and exploitative abuses (excessive pricing or discrimination between customers). In its 2003 *Cofarca* decision, the Spanish Commission for Markets and Competition (CNMC) fined a cooperative of pharmacists for abusing its dominant position in a regional market of wholesale distribution of medicines by imposing minimum purchase obligations on its members. In a decision of July 2017, the CNMC closed the proceedings initiated against IMS Health for an alleged infringement of article 2 of the SCA and article 102 of the Treaty on the Functioning of the European Union (TFEU) by means of a commitment decision, whereby IMS undertook to eliminate certain clauses in the contracts with Spanish pharmaceutical wholesalers that allegedly foreclosed competitors (most favoured nation clause; obligation to inform IMS of the intention to supply data to IMS's competitors; right to terminate the contract if the wholesaler supplied data to IMS's competitors or directly competed with IMS) and not to increase, above current levels, the reduction in the price paid to wholesalers for the supply of data in case the wholesaler also provided such data to third parties. In a decision of July 2017, the CNMC closed the infringement proceedings initiated against Aspen and its Spanish distributor, Deco Pharma, for alleged abusive practices by Aspen (refusal to supply and application of excessive prices) and an alleged agreement between Aspen and Deco Pharma to limit distribution, further to the European Commission's (EC) decision to initiate proceedings against Aspen, which, pursuant to article 11(6) of Regulation (EC) No. 1/2003, relieved the CNMC of its competence to apply EU competition provisions to the practices at issue.

In November 2019, the CNMC started infringement proceedings in relation to an alleged exclusionary abuse in the market of combined hormonal contraceptives. In December 2020, the CNMC started infringement proceedings in relation to a potential abuse of dominant position in the market for the manufacturing and supply of the orphan medicine CDCA-Leadiant. In a decision of April 2021, the CNMC decided not to initiate infringement proceedings against AstraZeneca for alleged predatory pricing in the market for inhalers, having found that it was not dominant and its pricing policy was a reaction to competitors' aggressive offers with the objective of not being excluded from the market. In another decision of April 2021, the CNMC decided not to initiate infringement proceedings against AbbVie, holding that the discounts granted to healthcare services and hospitals did not have exclusionary effects on biosimilar suppliers, which had offered lower prices and gained a significant market share in a short period.

### De minimis thresholds

30 | Is there any de minimis threshold for a conduct to be found abusive?

Pursuant to article 5 of the SCA, the prohibition of abuse of a dominant position set forth in article 2 of the SCA does not apply to conduct of minor importance that is not capable of significantly affecting competition. However, there is no specific threshold below which conduct is not deemed abusive.

## Market definition

- 31 | Do antitrust authorities approach market definition in the context of unilateral conduct in the same way as in mergers? If not, what are the main differences and what justifies them?

In merger cases, the CNMC has in general defined the relevant market relying on the anatomical therapeutic chemical (ATC) classification level 3 as the starting point (although on occasions it has relied on other ATC levels, including ATC5). In general terms, when assessing unilateral conduct, the CNMC tends to define markets more narrowly. For instance, in a decision of 13 February 2014, in the context of a possible abuse of a dominant position by Pfizer, the CNMC defined the market based on the fourth ATC level. It remains to be seen how in pending cases the CNMC will take into account the *Servier* judgment, which sets limits on the tendency of competition authorities to define the relevant market narrowly in abuse cases.

## Establishing dominance

- 32 | When is a party likely to be considered dominant or jointly dominant? Can a patent owner be dominant simply on account of the patent that it owns?

The market share is the first element analysed when assessing dominance together with other factors, such as the market shares of competitors, historical volatility of such market shares, entry barriers, countervailing buyer power and the level of regulation, a key element in the pharmaceutical sector.

For many years, the Spanish competition authority has held that, in view of the heavy regulatory burdens, and in particular the intervention of prices by the public authorities and the buyer power of the National Health System, pharmaceutical companies are not in a dominant position even if their market share in a given product market is clearly above 50 per cent. These findings have been made in the context of complaints against manufacturers for refusing to supply extraordinary quantities of pharmaceuticals to wholesalers. In recent years, the authority no longer seems to exclude the possibility of dominance. In particular, in the *Sedifa-Grufarma* case, the former competition authority, the National Competition Commission (CNC), stated that the fact that the activity of pharmaceutical companies is regulated and their ability to act may be limited in certain aspects does not impede a possible finding of dominance (which was not established in the case at issue).

In the *Pfizer/Xalatan* case, the CNMC found that Pfizer held a dominant position because of the exclusivity granted by the patent on the latanoprost active substance. However, a patent holder should be held dominant only if no substitutes of the product in question exist on the relevant product market. In its judgment of 7 December 2015, the Provincial Court of Madrid refused to find dominance based only on ownership of a patent.

## IP rights

- 33 | To what extent can an application for the grant or enforcement of a patent or any other IP right (SPC, etc) expose the patent owner to liability for an antitrust violation?

There are no precedents in Spain where an application for a grant of a patent has been considered as an abuse. In the *Pfizer/Xalatan* decision of 13 February 2014, the CNMC closed the proceedings initiated against Pfizer in relation to the prolongation of Xalatan's patent, holding that no infringement of article 2 of the SCA or article 102 of the TFEU had been proved. In its reasoning, the CNMC referred to the *AstraZeneca* judgment (C-457/10), although it did not expressly invoke the differences between Pfizer's and AstraZeneca's respective conduct to conclude that Pfizer's conduct was not abusive. The CNMC also seems to have taken

into account the fact that Pfizer did not send communications to Spanish authorities and generic producers concerning the prolongation of its patent, it only initiated judicial proceedings against one generic producer that it then withdrew and generic products were marketed in Spain during the period of the patent's prolongation. Interestingly, the CNMC's investigation was prompted by an investigation of the Italian competition authority concerning essentially the same product and similar practices, which, however, terminated with an infringement decision confirmed by the Italian State Council.

Regarding the enforcement of patents by bringing actions for patent infringement, in the 1998 *Wellcome* case (R 315/98), the Spanish competition authority found that the criminal proceedings for patent infringement initiated by Wellcome against the generic producer Combino Pharm and the company that manufactured generics on behalf of Combino Pharm were aimed at protecting alleged patent rights that Wellcome deemed infringed by these two companies. It found that this practice could not be deemed as an unfair competition act by reason of the publicity given by the press to the proceedings at issue and in any event did not appreciably affect competition contrary to the public interest. In the 2011 *Novartis* decision, the CNC closed proceedings against Novartis for an alleged abuse of a dominant position by bringing an action for patent infringement against the generic company Actavis, which it subsequently withdrew. The CNC held that Novartis' legal suit and request for preliminary measures could a priori seem excessive or disproportionate in light of Actavis' conduct (Actavis had obtained marketing and price authorisation for a generic product), but there were no indications of an abusive exercise of the right to judicial protection, to the extent that Novartis' withdrawal of the legal suit was not the result of an agreement or settlement between the parties. In November 2019, the CNMC started infringement proceedings in relation to an alleged abuse consisting of the use of legal and judicial actions to hinder the entrance of new competitors to the market for combined hormonal contraceptives.

- 34 | When would life-cycle management strategies expose a patent owner to antitrust liability?

There are no decisions of the Spanish competition authority on life-cycle management strategies. However, the *AstraZeneca* judgment (C-457/10) is likely to be followed as a precedent. The *Pfizer/Xalatan* case also provides the first example of the CNMC's position towards practices aimed at prolonging patent protection.

## Communications

- 35 | Can communications or recommendations aimed at the public, HCPs or health authorities trigger antitrust liability?

Although there are no precedents of the Spanish competition authority, it cannot be excluded that certain communications or recommendations by dominant pharmaceutical companies to the public or HCPs raise antitrust concerns, in line with the precedents of other national competition authorities that held that the implementation of a communication strategy aimed at doctors and pharmacists to denigrate generics constituted an abuse.

## Authorised generics

- 36 | Can a patent owner market or license its drug as an authorised generic, or allow a third party to do so, before the expiry of the patent protection on the drug concerned, to gain a head start on the competition?

In principle, there are no incentives for a patent holder to license or market a generic before the expiry of its patent, since this could lead to a reduction in the price of the patented medicine as a result of the application of the reference price system.

## Restrictions on off-label use

37 | Can actions taken by a patent owner to limit off-label use trigger antitrust liability?

There are no precedents of the Spanish competition authority in relation to actions taken by a patent holder to limit off-label use. However, following the *Avastin* judgment of the Court of Justice of the European Union (C-179/16), an agreement between the patent holder and an undertaking marketing a competing product to disseminate misleading information on adverse reactions resulting from off-label use of one of the competing products, with a view to reducing the competitive pressure exerted on the other product, would be deemed a restriction of competition by object. It cannot be excluded that a similar practice could be deemed abusive if carried out unilaterally by a dominant undertaking.

## Pricing

38 | When does pricing conduct raise antitrust risks? Can high prices be abusive?

Pricing conduct of dominant pharmaceutical companies is capable of raising antitrust risks, as shown by the EC's February 2021 commitment decision in the *Aspen* case and precedents of other national competition authorities that sanctioned predatory pricing as well as excessive prices. To establish the existence of excessive prices, the Spanish competition authority is likely to use price-cost comparisons, possibly in conjunction with other comparisons (comparison with prices of the product under investigation over time, prices in other member states or prices of other products, when relevant). The CNMC started infringement proceedings against Aspen and its Spanish distributor for alleged excessive prices, although it finally closed the file following the initiation of the EC proceedings in the same matter.

## Sector-specific issues

39 | To what extent can the specific features of the pharmaceutical sector provide an objective justification for conduct that would otherwise infringe antitrust rules?

For many years, the Spanish competition authority and courts have recognised that the specific features of regulation may exclude the existence of dominance on the part of pharmaceutical companies, although in the *Sedifa-Grufarma* case, the CNC did not exclude the possibility of dominance on this basis. However, in the same case, the CNC held that the alleged abusive conduct – refusal to supply to certain wholesalers – should be assessed taking into account the legal and economic context, in particular, the partial liberalisation of the price of medicines following the 2006 Medicines Act, which prompted a restructuring of the pharmaceutical companies' distribution networks for efficiency reasons. The CNC finally held that even assuming dominance, the conduct at issue was not abusive since it was objectively justified by this restructuring aimed at increasing efficiency. In its decisions of 19 January 2017 and 30 August 2018, the CNMC relied on the state's intervention on prices of medicines to come to the conclusion that the undertakings' pricing systems did not infringe article 1 of the SCA.

## UPDATES AND TRENDS

### Recent developments

40 | Are there in your jurisdiction any emerging trends or hot topics regarding antitrust regulation and enforcement in the pharmaceutical sector?

As shown by the investigations concerning immunosuppressant medicines and inhalers, as well as the infringement proceedings concerning combined hormonal contraceptives and the orphan medicine CDCA-Leadiant, the Spanish Commission for Markets and Competition (CNMC)

is intensifying its enforcement activities in relation to alleged abuses of dominant position by pharmaceutical companies. (In the inhalers and immunosuppressant investigations the CNMC did not ultimately initiate infringement proceedings.)

In its Action Plan 2021–2022, the CNMC states that it will closely monitor the sectors most affected by the covid-19 pandemic, such as the pharmaceutical sector, and will investigate the possible application of excessive prices for medicines and hygiene products.

## Coronavirus

41 | What emergency legislation, relief programmes and other initiatives specific to your practice area has your state implemented to address the pandemic? Have any existing government programmes, laws or regulations been amended to address these concerns? What best practices are advisable for clients?

Legislative measures adopted to address the pandemic include the amendment of article 94(3) of Royal Legislative Decree 1/2015 to provide that to protect public health in an exceptional health situation, the Interministerial Price Commission for Medicines may fix the maximum retail price of non-prescription medicines and medical devices, as well as other health protection products, for the duration of the exceptional situation. In addition, Royal Decree 463/2020 suspended the deadlines for administrative proceedings, including proceedings before the CNMC.

In response to the covid-19 outbreak in March 2020, the CNMC set up a dedicated mailbox for the submission of complaints and requests for informal guidance on cooperation agreements between competitors. The CNMC received more than 500 complaints and requests for guidance and is currently investigating possible anticompetitive practices concerning, inter alia, the marketing of hygiene products. It has also received requests for guidance in relation to agreements concerning these products.
